

Python AI - Chatbot

Project objective:

* The primary objective of this project is to design and implement a basic **Rule-Based AI Chatbot** using Python.

Python code:

```
while True:

    user = input("You: ").lower()

    if user == "hello" or user == "hi":

        print("Bot: Hello! Nice to meet you.")

    elif user == "how are you":

        print("Bot: I am fine. Thank you!")

    elif user == "what is your name":

        print("Bot: My name is AI Chatbot.")

    elif user == "bye" or user == "exit":

        print("Bot: Goodbye!")

        break

    else:

        print("Bot: Sorry, I don't understand.")
```

working:

- ❓ **Step 1: Infinite Loop Initialization (while True).**
- ❓ **Step 2: Input and Normalization (.lower()) .**
- ❓ **Step 3: Conditional Mapping (if-elif-else) .**
- ❓ **Step 4: Termination Condition (break) .**
- ❓ **Step 5: Fallback Mechanism (else) .**

Conclusion: Conclusion:

This project successfully demonstrates the fundamentals of building a **Rule-Based Chatbot** using Python.
